# Data Centre

Core Products EMEA

# Data Centres

Specifying, purchasing, and installing your data centre has never been easier. To reduce the time and effort you spend on your infrastructure, we have compiled this guide to provide you with at-a-glance ordering information for our most popular products as well as innovative resources we've created to help save you time and money – because products are only part of what it takes to make your data centre successful.

As a leading global company, we work hard to make sure these great products are on the shelves of our distributors, ready for purchase when you need them ... supported by our FastShip programme.

# Bill-of-Materials Tool

**Time is money; don't spend more time than necessary creating your bills of materials.**

Now it's easier than ever to choose the fibre optic and shielded copper products you need for your local area network or data centre. Simply select the products you need, modify the bill of materials as needed, and save it on your own computer. You can even email the final file to your preferred distributor for a price quote, or to a colleague for reference.

**Download** the free tool, and transform the way you work!

# Corning's Fast Programmes

## FastShip

In stock and ready to ship in 72 hours!

Product availability is critical to your installations, and quick access to the materials you need can make or break a project. Our FastShip programme for fibre optic and copper solutions for data centres and storage area networks quickly supports your day-to-day work like moves, adds, and changes.

The FastShip programme flag indicates which part numbers are available for shipment within 72 hours of purchase order confirmation. And if you need products even faster, expedited service is available on request.\*

For more information, contact Corning Customer Care at [00800 2676 4641](tel:0080026764641) or [cc.emea@corning.com](mailto:cc.emea@corning.com).

## FastConnect

Select made-to-order products in two weeks!

Can't find what you need in stock with our authorised distributors in EMEA? Selected items of our core products for data centres and storage area networks (SANs) are available for quick order and shipment through our FastConnect programme.

This “made-to-order” programme provides shipping within two weeks upon receipt of your purchase order at Corning. To see which items are available, please contact Corning Customer Care.\*

This flag next to a product number denotes it is available under the FastShip/FastConnect programme.

\*Terms and conditions apply. Please visit <http://opcomm.corning.com/fast> for further details.

You say challenge.  
We say opportunity.

### Corning® RocketRibbon™ Extreme-Density Cables

Can your network support emerging 5G technology, where high-fibre availability is critical? We created RocketRibbon extreme-density cables, designed for data centre and telecom applications, to help meet your network-performance challenges.

Experience industry-leading density from a cable that is also easy to manage, identify, and trace. And suddenly, your network challenges may feel more like opportunities.

## Are you future-ready?

Visit [corning.com/en/rocketribbon](https://corning.com/en/rocketribbon) to learn more about our cabling solution for emerging network requirements.

# Corning takes care of the cleaning process for you!

As a leader in optical fibre and connectivity, Corning understands the value of clean connectors. That's why we developed a new factory cleaning and sealing process, Corning® CleanAdvantage™ technology, ensuring a pristine end face upon first use for all our EDGE™ and EDGE8® solutions. So, go ahead and uncap that CleanAdvantage connector and connect with confidence.

## Save up to **17%** install time

No need for cleaning or visual inspection before the first install.

## Save up to **95%** on consumables

No cleaning pens, cassettes, and wipes necessary.

## Minimises debris transfer

Reduces the risk of debris transfer on the end face, minimises signal degradation.

## Standardised offering

High density paired with high performance at no extra cost.

- 67% fibre utilisation or requires use of conversion modules

# To Bend or Not To Bend? Not Much of a Question

## Fibre Optic Cables

Did you know? Corning® ClearCurve® bend-insensitive OM3/OM4 multimode fibres offer outstanding transmission performance in fibre optic cabling systems. ClearCurve fibres are the world's first laser-optimised multimode fibres to withstand tight bends at or below 7.5 mm radius with substantially less signal loss than traditional multimode fibres, while being fully standards compliant and backward compatible.

ClearCurve optical fibre is a key element to ensure operational reliability when designing custom-engineered components, thanks to the significant reduction in macrobend loss even in the most challenging bend scenarios. This allows us to provide significantly greater density across the range, combined with simple design and integration for LAN and SAN areas within the data centre, while the pre-terminated components allow for reduced installation time and faster moves, adds, and changes (MACs).

Corning® SMF-28® Ultra optical fibre is an ITU-T recommendation G.652.D compliant optical fibre. Utilising our enhanced low-loss and bend-fibre technologies, this full-spectrum fibre has bend performance that exceeds the ITU-T recommendation G.657.A1 standard. SMF-28 Ultra fibre offers industry-leading specifications for attenuation, macrobend loss and polarisation mode dispersion values, which provide a solid foundation for new network deployments as well as upgrades to existing networks.

Since bringing the first fibre to the market more than 40 years ago, our leadership in single-mode fibre innovation has been unparalleled.

# Recommended Standards for Multimode Fibre According to ITU or IEC

| The IEC 60793-1-47 Standard |                 |                               |                                |
|-----------------------------|-----------------|-------------------------------|--------------------------------|
| Mandrel Radius              | Number of Turns | Maximum Attenuation at 850 nm | Maximum Attenuation at 1300 nm |
| 37.5 mm                     | 100             | < 0.5 dB                      | < 0.5 dB                       |

| The ITU-T G.651.1 Standard |                 |                               |                                |
|----------------------------|-----------------|-------------------------------|--------------------------------|
| Mandrel Radius             | Number of Turns | Maximum Attenuation at 850 nm | Maximum Attenuation at 1300 nm |
| 15 mm                      | 2               | < 1.0 dB                      | < 1.0 dB                       |

| Corning® ClearCurve® Multimode Standard* |                 |                               |                                |
|--|-----------------|-------------------------------|--------------------------------|
| Mandrel Radius                           | Number of Turns | Maximum Attenuation at 850 nm | Maximum Attenuation at 1300 nm |
| 37.5 mm                                  | 100             | < 0.15 dB                     | < 0.15 dB                      |
| 15 mm                                    | 2               | < 0.1 dB                      | < 0.3 dB                       |

EDGE8® Housings

EDGE8® HD housings mount in 19-in racks or cabinets and provide industry-leading ultra-high-density connectivity when combined with EDGE8 modules, panels, harnesses, trunks, and patch cables. The unique design of EDGE8 housings includes sliding drawers enabling module or panel installation from the front or rear of the housing. Each sliding drawer contains integrated cable routing elements to support effective patch cable management while providing unprecedented finger access without the need for tools or other accessories. The mounting and removal of trunks is a simple, quick, and tool-less operation enabling rapid deployment of high-fibre-count trunks for faster moves, adds, and changes (MACs).

| EDGE8® Housings                                       |                                   |                                      |  |

## EDGE8® Trunks

EDGE8® MTP® trunks are pre-terminated cables with ultra-low-loss 8-fibre MTP connectors with pins on both ends. Pinning the trunks allows for a single, pinless patch cable deployment for all installations, reducing stocking and deployment complexity. The trunks build up the major skeleton of the passive network infrastructure and, thanks to the superior design containing Corning® ClearCurve® fibre, they enable rapid deployment for your campus LAN or data centre facility. All trunks are shipped with strain-relief clips that allow for tool-less installation in all EDGE™ solutions (EDGE and EDGE8) and Plug & Play™ systems housings.

| EDGE8® Trunks |                      |                     |                     |

\*Select the trunk length (plug-to-plug): replace xxx.x with 002-300.5; M = metre, Trunks can be ordered in 0.5 m increments, The first letter of the part code denotes the pulling grip type:

G = grip on first end, D = grip on both ends, Z = no grip

For additional fibre counts up to 288 F, please check the online catalogue.

For select items under the FastShip/FastConnect Programmes, please contact Corning Customer Care at 00800 2676 4641 or [cc.emea@corning.com](mailto:cc.emea@corning.com).

EDGE8® MTP® Adapter Panels

EDGE8® adapter panels are a pass-through panel with a single row of MTP® adapters available in 1-,2-,3-, or 4-port variants. The backbone trunks connect at the rear of the adapters, providing various options at the front from end-to-end links with patch cables or harness solutions or as a cross-connect in the main distribution area (MDA). The MTP adapter panel is the easiest way to implement a parallel optic application in your data centre whilst retaining the existing hardware. All EDGE8 adapter panels can be installed from the front or the rear of any EDGE8 hardware using a simple release mechanism, negating the need for any special tools.

### EDGE8® Universal Modules

EDGE8® modules provide the interface between the MTP® connector on the EDGE8 trunk and the LC duplex patch cables that will connect directly to the electronics or as a cross-connect in the main distribution area (MDA). The internal wiring follows the universal wiring scheme to ensure the correct fibre polarity is maintained throughout the system independent of how many modules are utilised within the link. Ultra-low-loss performance of the module allows for multiple connections without compromising the tight loss budgets associated with higher-speed applications, permitting longer links than specified by the standards. Specially designed shutters ensure the end face of the connectors are never touched and replace the standard dust caps that, typically removed, are never replaced. In addition, the shutters are visual fault locator (VFL) compatible to allow easy port identification whilst diffusing the VFL light to ensure adequate eye safety.

| EDGE8® Universal Modules |                      |                      |                      |

EDGE8® Port Breakout Modules

EDGE8® port breakout modules are designed to provide additional flexibility and space savings to the system whilst utilising the cost saving benefits of disaggregating a single 40G QSFP port into four 10G SFP+ ports. Deploying 40G QSFP ports and port breakout modules in the MDA can reduce the number of chassis and line cards by two-thirds when compared to 10G SFP+ ports for additional savings in density and power requirements.

In this example, each row of QSFP ports (18) can be replicated by a single 1U EDGE8-SP housing.

| EDGE8® Port Breakout Modules |                        |                       |                      |

\*Select the module length (tip-to-tip): replace xxx.x with 000.5-025.5; M = metre  
Modules can be ordered in 0.5 m increments

## EDGE8® Harnesses

The EDGE8® QSFP to SFP+ harness is an MTP® to four LC duplex assembly designed to disaggregate a 1 x 40G port into four LC duplex ports to benefit from the potential cost savings associated with 40G electronics. Similar to the port breakout module, an EDGE8 harness can be deployed in an equipment distribution area (EDA) to direct connect active electronics to the cabling infrastructure. Disaggregating a 1 x 40G port into four 10G ports can only be achieved through parallel optics. EDGE8 harnesses are available in both staggered and non-staggered options.

For polarity guidance, please refer to [AEN 156](#).

For stagger selection, please refer to [AEN 157](#).

EDGE8® MTP® Patch Cords

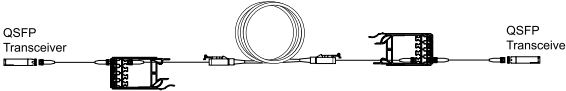

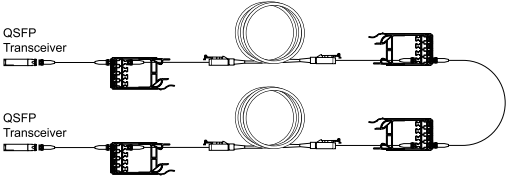

The EDGE8® MTP® patch cords allow for a seamless migration to higher data rates in the data centre when used in conjunction with the EDGE8 pinned trunks. By pinning the trunks, we have removed the need to potentially stock three different patch cords variants for direct, interconnect, and cross-connect scenarios, meaning a pinless-to-pinless patch cord will support all installation requirements. These patch cords are wired to TIA-568 Type-B polarity as standard; however, other polarity and pin methods are available on request.

Fibre Patch Cords

LC Uniboot duplex patch cords allow for a quick and easy conversion from a TIA-568 A-B polarity to a TIA-568 A-A polarity without exposing the fibres or requiring any tools. The Uniboot design allows one cable to carry both fibres, reducing the cable bulk when routing.

## EDGE™ MTP® Adapter Panels

EDGE™ adapter panels are a pass-through patch panel with a single row of MTP® adapters. The backbone trunks connect at the rear of the adapters, with various options possible at the front, from end-to-end links with patch cable or harness solutions, or as a cross-connect used in the main distribution area (MDA). The MTP adapter panel is the easiest way to implement parallel optic applications in your data centre whilst retaining the existing hardware.

All EDGE adapter panels can be installed from the front or the rear of any EDGE hardware using a simple release mechanism negating the need for any specialised tools.

EDGE™ Universal Modules

EDGE™ modules provide the interface between the MTP® connector on the trunk and the LC duplex patch cords that connect directly into the electronics or as a cross-connect in the main distribution area (MDA). The internal wiring based on universal polarity ensures the correct fibre polarity throughout the entire system independent of how many modules are implemented within the link. Specially designed indents in the shutters ensure that the end faces of the connectors are never touched. In addition, the shutters are visual fault locator (VFL) compatible allowing easy port identification whilst defusing the VFL light to provide adequate eye safety.

# EDGE™ Trunk Harness MTP® (with pins) to 6x LC Duplex

The EDGE™ trunk harness is designed to facilitate an interconnect point when the electronics are located in a separate area from the cross-connect or patching field. The harness comes with duplex LC connectors to interface with the electronics and a pinned MTP® connector to connect into a trunk. This can be used in an equipment distribution area (EDA).

For polarity guidance, please refer to [AEN 156](#).  
For stagger selection, please refer to [AEN 157](#).

## MTP® Patch Cords for Parallel Optic Applications

EDGE™ multimode patch cords allow for the seamless migration to higher data rates in the data centre when used in conjunction with our universal trunks. This patch cable is based around pinned or non-pinned 12-fibre MTP® connectors. Pictured here are the most common applications for this type of patch cable to make ordering easier. All listed patch cords have a TIA-568 Type-B polarity.

### Which polarity and configuration MTP patch cords do I need for my 40 Gigabit network?

When deploying MTP patch cords, the following applications and scenarios should be considered:

- Direct-connect: Connection between active parallel optic devices
- Interconnect: Connection from device to patch panel
- Cross-connect: Connection from patch panel to patch panel

| Patch Cord Type | Application    | Pin Option                  | To be Used with Trunk | Patch Cord Polarity |
|-----------------|----------------|-----------------------------|-----------------------|---------------------|
| 1               | Direct-connect | Without pins – without pins | Type B (Universal)    |                     |
| 2               | Interconnect   | With pins – without pins    | Type B (Universal)    | Type B (Universal)  |
| 3               | Cross-connect  | With pins – with pins       | Type B (Universal)    | Type B (Universal)  |

| Fibre Type      | OM3                | OM4               | OS2               | Fibre Type   |
|-----------------|--------------------|-------------------|-------------------|--------------|
| Cable Colour    | Aqua               | Aqua              | Yellow            | Cable Colour |
| Patch Cord Type | Catalogue Number   | Catalogue Number  | Catalogue Number  | Length       |
| 1               | J757512TEZ-NBxxxM* | J757512QEZ-NBxxxM | J909012GEZ-NBxxxM | 1 up to 20 m |
| 2               | J759312TEZ-NBxxxM  | J759312QEZ-NBxxxM | J899012GEZ-NBxxxM | 1 up to 20 m |
| 3               | J939312TEZ-NBxxxM  | J939312QEZ-NBxxxM | J898912GEZ-NBxxxM | 1 up to 20 m |

\*Select the patch cable length (tip-to-tip): replace NBxxxM to NB001M for 1 m up to NB020M for 20 m  
Patch cables can be ordered in 0.5 m increments

# MTP® Patch Cords for Parallel Optic Applications

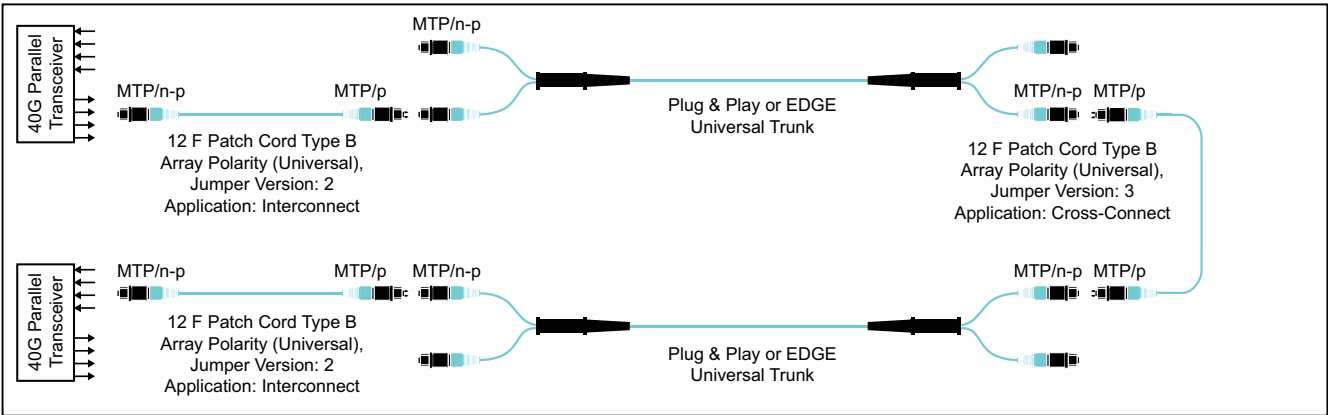

## Application: Direct-Connect

## Application: Interconnect

## Application: Interconnect and Cross-Connect

Fibre Patch Cords

LC Uniboot duplex patch cords allow for a quick and easy conversion from a TIA-568 A-B polarity to a TIA-568 A-A polarity without exposing the fibres or requiring any tools. The Uniboot design allows one cable to carry both fibres, reducing the cable bulk when routing.

# Plug & Play™ Systems

This is an overview of the Plug & Play™ systems, for more information, please refer to the Plug & Play family spec sheet.

## PCH Plug & Play™ Housings

PCH Plug & Play™ housings mount in 19-in racks or cabinets and provide industry-leading density when combined with Plug & Play modules, panels, harnesses, trunks, and patch cables. The housings enable quick deployment of the module or panel in the housing. The PCH-M3-01U contains a sliding drawer with integrated patch cable protection and a labelling element on the rear side of the front door. The PCH-04U housing contains an integral hinged patch cable manager on the front which can be locked in the “up” position for an additional 1U of horizontal patch cable management or left in the default “down” position to provide additional capacity for patch cable routing along the top of the housing. Mounting and removal of trunks in both housings is a simple, quick, and tool-less operation enabling rapid deployment. Additional mounting brackets for trunks are shown on the accessory page.

| PCH Plug & Play™ Housings  |                                     |                                       |  |

| 19-in 1U Plug & Play Housing for up to 3 Plug & Play modules or CCHE adapter panels  | 36 x LC Duplex Ports (72 fibre)     | 36 x MTP Ports (432 fibre)            | PCH-M3-01U  |

## Plug & Play™ Trunks

Plug & Play™ MTP® trunks are pre-terminated cables with 12-fibre MTP connectors on either side. The trunks build up the major skeleton of the passive network infrastructure, and thanks to the superior design including Corning® ClearCurve® fibres, they enable rapid deployment for your campus LAN or data centre facility. All trunks are shipped with strain-relief clips that allow for the tool-less installation in PCH Plug & Play systems housings.

## Plug & Play™ Trunk Harness MTP® (with pins) to 6x LC Duplex

The Plug & Play™ trunk harness is designed to facilitate an inter-connect point when the electronics are located in a separate area from the cross-connect or patching field. The harness comes with duplex LC connectors to interface with the electronics and a pinned MTP® connector to connect into a trunk. This can be used in an equipment distribution area (EDA).

For polarity guidance, please refer to [AEN 156](#).  
For stagger selection, please refer to [AEN 157](#).

## Plug & Play™ MTP® Patch Cord for Parallel Optic Applications

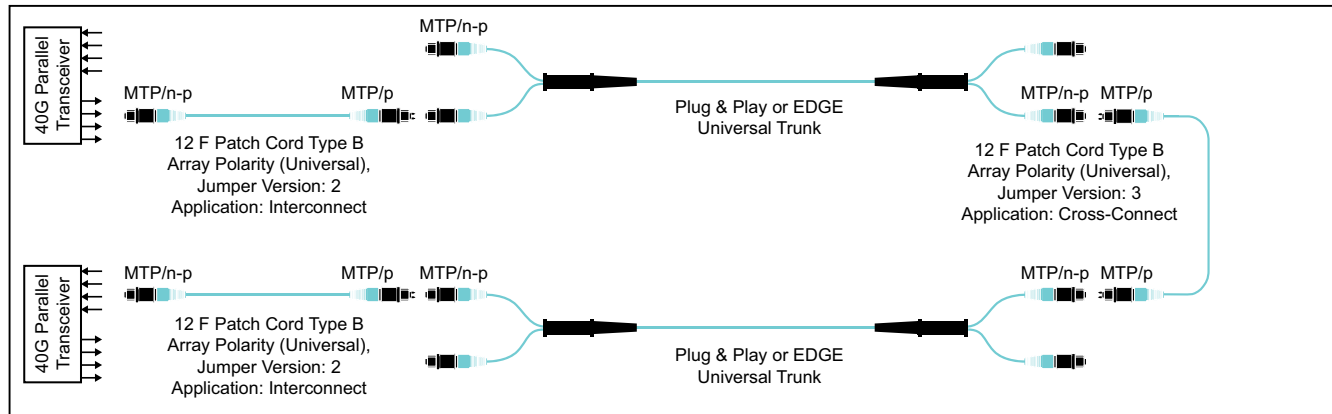

### Application: Direct-Connect

### Application: Interconnect

### Application: Interconnect and Cross-Connect

Fibre Patch Cords

LC Uniboot duplex patch cords allow for a quick and easy conversion from a TIA-568 A-B polarity to a TIA-568 A-A polarity without exposing the fibres or requiring any tools. The Uniboot design allows one cable to carry both fibres, reducing the cable bulk when routing.

FutureCom™ EA Panels

FutureCom™ EA patch panels are universal for all 19-in cabinet installations. They are available in black or stainless steel and are intended for flush-mounting installations. This concept allows a high-density solution for the application of choice in your data centre. Installation of the module in the panel is quick and easy and simply clicks into place.

## FutureCom™ EA Plug & Play™ Trunks

The FutureCom™ EA Plug & Play™ cabling systems are terminated with modules or connectors and is specified for applications up to 500 MHz. The combination of high-end copper cable with pre-terminated connectivity provides high-system margins for the complete cable link according to Class EA. The advantages of a preassembled system cable include reduced assembly costs, reduced installation time, the elimination of assembly mistakes, and consistent high quality.

## FutureCom™ EA Modules

The FutureCom™ EA cabling solution is based on the S500 module offering high-system margins for the transmission of digital data signals, compliant with Class EA and is fully supported by power-over-Ethernet Plus (PoE+). The integrated, flexible dust cover may be easily removed, if desired, and serves as protection for unused ports. Different cable routing for various installation challenges is possible with the variable cable entry for 0 degrees and 90 degrees.

# FutureCom™ EA Cables

FutureCom™ EA cables are low-skew products, i.e., the difference in propagation delay between the individual pairs is very low. This is increasingly being requested for 1/10 Gigabit Ethernet. The suitability of the cable for high-bit-rate transmission systems ensures a high degree of future readiness. Additional features are the slim design and low weight of the cables. Each pair is individually shielded with foil (foil twisted pair – FTP).

| Data Centre Cable |       |  |             |                |  |

## FutureCom™ EA Patch Cords

The FutureCom™ EA S/FTP flex/26 patch cord is terminated with IEC 60603-7-51 standards-compliant RJ45 connectors. The patch cables are designed for the transmission of digital data signals, including future applications in 10GbE systems compliant with Class EA (ISO/IEC 11801 AMD: 1 2008 & AMD: 2 2010), Cat. 6<sub>A</sub> (ANSI/TIA/EIA 568B.2-10) and IEEE 802.3an standards. The patch cords support power-over-Ethernet (PoE) applications in compliance with IEEE 802.3af (2003) and power-over-Ethernet plus (PoE+).

# Programmes and Services

CORNING

Network of  
Preferred Installers

## Network of Preferred Installers

Get connected to comprehensive, high-quality solutions for real-life problems and gain competitive advantage for your business by using our Network of Preferred Installers (NPI). Through selected NPI members, Corning delivers the largest and most complex LAN and data centre projects. Our experienced installers make it easy to build and maintain your future-ready network.

CORNING

Consultant LinkUp®  
Programme

## Consultant LinkUp® Programme

Corning is committed to being your primary resource for fibre and copper data cabling. Whether you are an IT consultant, planner, architect, or end user, our services are designed to make your life easier by giving you the best possible support for your day-to-day challenges. Take a look at two great resources:

CORNING

See the Light®  
Training Programme

## See the Light® Fibre Optic Training Programme

Service at your fingertips. Corning builds reliable and sustainable services for our partners and customers to meet individual needs in training and knowledge transfer on various levels. See the Light seminars offer you best-in-class training in different environments. Live and recorded webinars led by our technology experts, modular eLearning opportunities, and new classroom sessions meet your development plans from basic up to high-level topics.
